

CAPPING SYSTEMS PRODUCTS

BellatRx Secure Chuck Capper is a capping machine that applies and torques closures onto containers at 100 bpm. Less than 36 inches wide, the small footprint allows it to integrate into the smallest space. Mounted on castors, the Secure Chuck Capper can be moved from one line to another as the packaging operation requires. Changeover is simplified due to scaled settings and the standard touch screen controls where recipes can be stored. The Secure Chuck Capper is designed with an electronic lift—available through the touch screen—for varying bottle heights; up to 12 inches high.
